

# Value-creating Partnerships

Throughout the last 25 years NGI has contributed to raising the standards for hygiene and cleanability in the food industry.

We know that product development and hygienic design cannot stand alone. Innovation is also about the way we cooperate with customers, suppliers and other stakeholders in our value-chain.

That is why we are committed to establishing value-creating partnerships with Brand-Owners, OEMs, engineers, hygiene advisors, process consultants and other stakeholders in the food industry.

# Exchange & Excel

... And save money and resources

**NGI is the first industrial supplier of components worldwide to launch a revolutionary [NGI Buy Back Program](#).**

NGI takes responsibility for defining and communicating a new industry standard within hygienic design. We cooperate with and support all businesses wishing to standardize with certified hygienic components.

Translating this into practice, it means that we will purchase your old bearings and bearing houses when you replace them with optimized certified hygienic bearings and bearing houses from NGI.

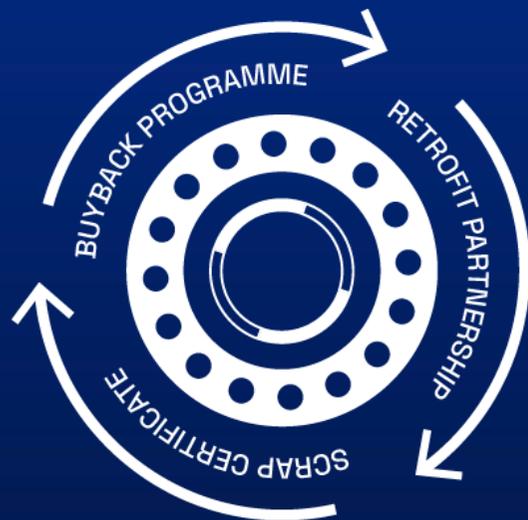

Once the products have been retrofitted we will issue an [NGI Scrap Certificate](#) which serves as proof for sustainable and responsible waste management. Upgrading your production facilities with bearings from NGI the next time they need to be replaced is not only common sense, it is economically and environmentally the right thing to do.

Together with our hygienic experts, you will go through your production facilities and prepare a report that describes and assesses potential operating expense savings, hygiene improvements, main benefits and other pay-back potential of establishing a value-creating [NGI Retrofit Partnership](#).

Following the assessment of your production facilities, NGI will take full responsibility for communicating the findings and recommendations from the report to machine builders and other suppliers in your supply chain. This way you can be sure that both supplies of new machinery and maintenance of existing machinery complies with the hygiene standards and avoid future retrofit projects.

# Main Benefits

- Healthy economy
- Common sense and responsibility
- Knowledge-sharing and dialogue
- Potential operating expense savings
- Hygienic optimization
- Financial savings

## Contact

Get in touch with your local NGI consultant and learn more about the NGI Buy Back Programme and the benefits of establishing an NGI Retrofit Partnership which provides your company with:
